How to install Global VPN?

To setup Global VPN in your workstation please follow the instructions based on the operating system listed below:

> MacOS

∨ Windows

Download Instructions:

1. Download the AWS VPN Client Installer: **aws_vpn_client.msi.**
2. Download the Turvo Configuration File, **(turvo-*.ovpn)** attached in the email.

Installation Instructions:

1. After both downloads have completed, open **aws_vpn_client.msi** *(double-click)* to start installation.
2. Once installation has succeeded, go to **File > Manage Profiles > Add Profile.**
3. Navigate to the "Downloads" folder and select **turvo-*ovpn** file.
4. Enter Display Name based on geography, examples below:
   - turvo-usa *(United States)*
   - turvo-apac *(India)*
   - turvo-emea *(Belarus/Ukraine)*
5. Click **Add Profile**.

Post-Installation Instructions:

1. Launch AWS VPN Client Installer
2. Click **Connect**.

3. Enter the Username & Password provided by Turvo #helpdesk and click **Okay**.

4. Finally, once successfully connected to Global VPN, verify connectivity to any internal Turvo links:

- launchpad.turvo.net

- blog.turvo.net

> Linux
